

Service is our passion.

DGUV Rule 100-500 Inspection

Inspection of dryers for coating materials in accordance with DGUV Rule 100-500 necessary?

According to Section 3 (3) of the ordinance on Industrial Safety and Health, the employer must determine the type, scope and deadlines for required inspections of work equipment. During these inspections, safety-related defects are to be systematically recognised and rectified.

According to DGUV* Rule 100-500, the employer must ensure that dryers and their safety equipment are inspected by an expert at appropriate intervals, but at least once a year.

*German Social Accident Insurance e.V. is the joint organisation for the nine commercial employers' liability insurance associations and the 24 accident insurance funds in Germany.

Why is a regular electrical safety check not sufficient?

Dryers in accordance with EN 1539 and UWVBG 24 are used for drying surfaces, moulded coatings and impregnating resins. The (flammable) solvents released during these processes represent a potential hazard in the event of a fault, as they can accumulate with air to form a hazardous, explosive atmosphere!

Only by regularly checking these devices can the permitted solvent quantities be reliably processed and safe operation guaranteed.

We are there for you 365 days a year, 24 hours a day.

Our service technicians are excellently trained specialists. Our service teams are professionally competent and available at all times to provide you with reliable support in a spirit of partnership.

More safety from a single source.

Simply have the DGUV Rule 100-500 inspection carried out at the same time as the annual maintenance. In future, take advantage of our quick, uncomplicated and, above all, cost-effective way of ensuring the safety of your coating material dryer.

We ensure trouble-free, safe and legally compliant operation of your systems!
