

Service is our passion.

Electrical Inspection according to DGUV V3

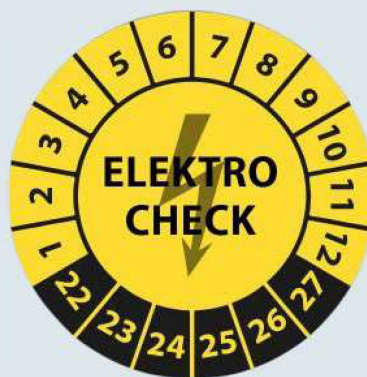

What is DGUV Regulation 3?

Since 1 April 1979, the periodic testing of all electrical appliances and electrical systems (including environmental simulation systems) in companies has been mandatory in accordance with DGUV* Regulation 3. The tests are carried out on the basis of the accident prevention regulation DGUV Regulation 3 of the employers' liability insurance associations.

The inspections must be carried out at prescribed intervals of one to a maximum of four years.
It is a legal requirement that carried out every 4 years!

*German Social Accident Insurance e. V.
is the joint organisation for the nine industrial employers' liability insurance associations and the 24 accident insurance funds in Germany.

Inspection is good. By experts even better!

There is a wide range of offers for the inspection of electrical systems.

Why should you still choose an inspection by our weisstechnik® service?

The inspection of an environmental simulation system cannot be compared with a conventional electrical safety check. Due to the complexity of the system, it is necessary for the person performing the inspection to have detailed knowledge of the function and structure of the system.
Lack of background knowledge in an inspection can lead to irreparable damage to sensitive components or to parts of the system being not inspected at all.

Therefore, play it safe and have professional inspections carried out by our experienced, qualified and annually trained staff.

We are there for you 365 days a year, 24 hours a day.

Our service technicians are excellently trained specialists. Our service teams are professionally competent and available at all times to provide you with reliable support in a spirit of partnership.

More safety from a single source.

Simply have the DGUV Regulation 3 inspection carried out at the same time as the annual maintenance.

In future, take advantage of our quick, uncomplicated and, above all, cost-effective way of ensuring the electrical safety of your environmental simulation systems.

We ensure trouble-free and legally compliant operation of your systems!
