

Service is our passion.
Thermography

**Recognise weak points.
Avoid standstill.**

Every switch cabinet is exposed to a range of harmful environmental influences every day.

Dust, vibration, humidity, UV radiation and low air exchange quickly lead to unexpected material fatigue and failure of installed electronic parts.

It is not uncommon for longer system downtimes and, in the worst case, consequential damage and fire damage to occur.

**Trust is good.
Electrical thermography is better!**

Many of our customers know what unexpected thermal anomalies can cause in electronic components in control cabinets.

The weisstechnik[®] service has therefore expanded its portfolio in the area of safety checks.

In addition to testing in accordance with DGUV regulation 3, we now also offer electrical thermography on the control cabinet of your electrical system.

We are there for you 365 days a year, 24 hours a day.

Our service technicians are excellently trained specialists. Our service teams are professionally competent and available at all times to provide you with reliable support in a spirit of partnership.

More safety from a single source.

Simply have the electrical thermography of the electrical components carried out as part of the legally prescribed safety checks and maintenance.

In future, take advantage of our quick, uncomplicated and, above all, inexpensive way of recognising thermally conspicuous areas at an early stage. Preventive safety measures, e.g. for fire protection, can then be derived and the service life of your systems extended.

We ensure trouble-free and safe operation!
