

Service is our passion.

# RetroFit Control unit

## Old control technology. Poor spare parts supply.

Due to the age of some control systems, bus systems and operating components and the resulting poor supply of spare parts, it makes sense to update the control technology at an early stage.

The heavy daily use and limited modification options also contribute to this.

However, a RetroFit not only extends the service life of your system, it also results in significantly lower costs than a new purchase.

Our RetroFit programme is ideal for small and large solutions. The range of retrofit services is huge.

## Convincing technology. Reliable results.

The control system used is the S!MPAC<sup>®</sup> digital control system with integrated soft PLC and EtherCAT bus system. S!MPAC<sup>®</sup> has been specially designed for use in climate test facilities and thermal engineering systems.

A connection to existing bus systems (ProfiBus, ProfiNET, EtherCAT, CAN-EtherCAT 2.0a/2.0b\*) and control via S!MPAC-SimSERV are possible.

With the innovative WEBSeason<sup>®</sup> user interface you can programme, control and monitor your test anytime and anywhere - even via tablet and smartphone. WEBSeason<sup>®</sup> this creates a new dimension in flexibility and efficiency.

## We are there for you 365 days a year, 24 hours a day.

Our service technicians are excellently trained specialists. Our service teams are professionally competent and available at all times to provide you with reliable support in a spirit of partnership.

### Simple operation for optimised processes. Set standards in communication!

With the S!MPATI® software, operating, documenting and archiving your test sequences is child's play.

S!MPATI® not only offers operating efficiency and performance, but with S!MPATI® online also a platform extension for the automatic creation of test reports - the ideal solution for your test processes!
